

Hello,

I'm Robert, a meticulous and diligent professional with a talent for driving quality and consistency throughout all phases of software projects. I have a remarkable background of using technologies and common tools to develop large-scale web applications in compliance with high-quality Standards.

Below listed are some of my expertise:

- Software Development Lifecycle (SDLC)
- Full-stack Development
- Project/Program Management
- Quality Assurance & Testing
- Software Support & Maintenance
- Database Management

I graduated from the Flatiron School for software engineering, and gained knowledge of developing full-stack applications with over 1500+ hours of hands-on experience designing and building secure REST APIs learning several programming languages and tech stacks. Shortly after I completed a full-stack Java intense course provided by 'Infosys'. I also build projects independently pushing the code to my personal Github account to continuously hone my craft as a software developer as technology evolves.

I am confident that my wide range of knowledge and talents will allow me to contribute to the success of your company. While others take pride in meeting all standards set before them: my passion is for delivering service and leadership that goes beyond organizational expectations.

All the best,
Robert Morales
