

Step 2

Next, bind the above properties to the `app.component.html` file.

Hint! Use the same syntax as the `title` property.

- All bound properties in the `app.component.html` file should be *below* the image:
 - The `city` should be an `<h3>` tag.
 - The `tag line` should be an `<h5>` tag.
 - The `about me` should be a `<p>` tag.

Step 3

Style each new element with the below requirements:

- The `<h3>` tag should have its own background color, a padding of 4px, a dotted border, and have margin-right and margin-left of 2-10em (whatever works best for your screensize).
 - Give the `<h5>` tag a bigger font size, a different font color, and a different font style.
-
