

Against: there was no choice but to be pioneers, no time to be beginners.

I am an American computer scientist, systems engineer, and business owner. I was Director of the Software Engineering Division of the MIT Instrumentation Laboratory, which developed on-board flight software for the Apollo space program. In 1986, I became the founder and CEO of Hamilton Technologies, Inc., in Cambridge, Massachusetts. The company was developed around the Universal Systems Language based on my paradigm of Development Before the Fact (DBTF) for systems and software design. I have published over 130 papers, proceedings, and reports about the 60 projects and six major programs in which I have been involved. On November 22, 2016, I was awarded the Presidential Medal of Freedom by U.S. President Barack Obama for my work leading the development of on-board flight software for NASA's Apollo Moon missions.

1. Paris, France

Paris, France's capital, is a major European city and a global center for art, fashion, gastronomy and culture. Its 19th-century cityscape is crisscrossed by wide boulevards and the River Seine. Beyond such landmarks as the Eiffel Tower and the 12th-century, Gothic Notre-Dame cathedral, the city is known for its cafe culture and designer boutiques along the Rue du Faubourg Saint-Honoré.
