

Hello,

Having recently finished a 10 month course at Flatiron School in software engineering focusing on Ruby on Rails, and javascript. Also completing a 8 week course provided by Infosys collaborating with ApprenticeNow focusing on java, typescript, and spring tools amongst other syntax and now prepared to start the next chapter in my life. I was thrilled when I came across this awesome opportunity in your search for candidates in software engineering. With both my educational and professional background in the software dev life cycle, I believe I have what it takes to be successful in this role.

As a full stack dev focusing on delivering top results in frame works, systems, and software development, I strive to be what it takes to be an impressive performer in the ever evolving world of technology. Skilled with both front-end and back-end development, my skill set is diverse and complementary.

I live and breathe information technology, particularly software development, and my spare time is used to constantly enhance my skill set. If granted the opportunity to work for you, I will bring the same drive and motivation over to your team.

I look forward to the chance to chat about near-term and long-term goals. On top of that, I'd love to share how my skills and tech achievements give me an excellent place from where to start. I will do whatever it takes to increase performance for this great organization.

Best Regards,

Robert Morales
