Professional Experience

Independent Personal Trainer

New York, NY. February 2020 - Present

Equinox

New York, NY. June 2016 - March 2022

- Owned and operated multiple gym locations.
- Managed employees, structured programs, and mentored new hires.
- Established customer base, retained & implemented strategies to continuously bring in new business.

Technical Skills

Ruby on Rails, Java, JavaScript, Angular, Typescript, Spring Tools, Postgres, MySQL, Heroku, Git.

Academic Projects

Capstone Project: Trainer Appointment Scheduler | Ruby on Rails

- Designed a Rails-powered appointment scheduling application that resolves time-management and customer-service issues from a personal trainer's perspective.
- Created a custom UI with React that showcases the app's unique features, such as a clientele rating system for trainers to prioritize their high-fidelity customers.
- Employed full CRUD functionality, and RESTful routes for easy seamless UI & UX.

Exotic Car Showcase | React, JavaScript

- This simple project lists and shows a collection of cars using the React framework.
- Implemented Object Oriented Programming fundamentals to create reusable components.
- Harnessed React form to input new data, and submit it to the database & displaying it to the browser.

Technical Projects

RealEstate Application | React, Chakra-UI, RapidAPI

- This real estate application allows users to search for rentals, or purchase properties based on individual needs.
- Accessing RapidAPI for aggregated data from multiple real estate resources in one place, and displaying it to the UI.
- Custom UI components such as the search filter where you can sort out your individual custom needs such as price, rooms, amenities, etc.

React Shopping Cart | React, Typescript, Material-UI

- Created a web shop with a shopping cart & as the consumer you can add items, delete items, calculate and display the total sum.
- Implemented MaterialUI for the CSS to build out the application faster for the best possible UX.

Drop Zone Application | NextJS, TailwindCSS, Firebase Database

- This application allows the user to enter text, drag, and drop multiple files to the dropzone & display to the browser.
- Utilized the React-Timestamp to display the datetime when the file is uploaded.
- Invalid files are rejected, triggering the border of the dropzone to turn red.
